DUNMORE Expands Gemini Series Team With New Business Development Manager

Patrick Anglim Brings Front-Line Engineering and Management Experience to Gemini Customers

Bristol, Pa., Dec. 10, 2012 – DUNMORE Corporation has created a new position to take advantage of its Gemini Series' ability to create high-quality thin films at competitive prices for industries such as food packaging and durable labeling.

The company named Patrick Anglim, a 20-year veteran of industrial engineering and thin film production, as development manager for [Gemini contract manufacturing](#). Anglim is responsible for helping outside manufacturers utilize Gemini Series production lines to apply multiple coatings and laminations.

Gemini is designed to make production of the most technically challenging thin films practical and cost effective. The company created the Gemini process to address its customers' growing needs for increasingly sophisticated thin films that incorporate more [complicated coatings and laminations](#).

Gemini features production lines in Brewster, N.Y. and Freiburg, Germany that can apply multiple coatings and laminations on fewer passes than conventional production lines. Gemini processes combine the [multi-headed coating](#) and laminating production lines with DUNMORE's 40-plus years of experience in advanced thin film production.

Anglim's experience in thin-film manufacturing includes production management and quality control. He holds a degree in industrial engineering from The College of New Jersey. Anglim started his career with what is now LyondellBasell, where he managed the QC lab. At the time, the company was the world's largest polypropylene manufacturer producing over 5 billion pounds annually. He joined DUNMORE in 1996 as quality manager for its Pennsylvania and New York manufacturing facilities. He managed a 10-person testing and conformance staff that monitored quality performance. From there Anglim was promoted to director of production, assuming responsibility for the manufacturing facilities in the US.

"Patrick has deep knowledge of both ends of the process – the customers' needs and Gemini's capabilities," said DUNMORE Vice President John Jordon. "Customers expect a high degree of technical acumen from DUNMORE. Patrick has technical credentials, and he also understands customers' business priorities from his experience running lines of business. There are a lot opportunities in the market now, especially in industries like food processing that are applying new thin-film technologies to create new products."

About DUNMORE

DUNMORE Corporation is a global supplier of engineered [coated and laminated films and foils](#). DUNMORE offers film conversion services such as coating, metallizing and laminating along with contract film manufacturing. DUNMORE produces coated film, metallized film and laminating film substrates for the photovoltaic, graphic arts, packaging, aerospace, insulation, surfacing and fashion industries.

DUNMORE is privately held, ISO 9001:2008 and OSHA VPP Star certified. For complete information on DUNMORE's products, services and industries served, please visit DUNMORE's website <http://www.dunmore.com/>.
